- 05 ROI Increase

INTRODUCTION

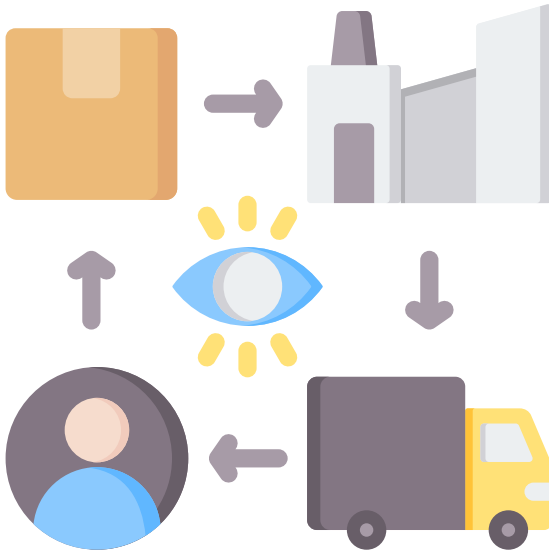

The logistics sector plays a pivotal role in the global economy, and its success hinges on the efficiency and accuracy of the supply chain. In this dynamic and evolving sector, companies need innovative solutions to gain a competitive edge. Here, TIM solutions come into play, offering a wide range of value to firms in logistics, especially in supply chain management, operational efficiency, and minimizing errors in business processes.

Our collaborations with CEVA Logistics have demonstrated how our solutions are effective and successful not just locally, but on a global scale. CEVA Logistics, as a leading player in the logistics sector, has significantly enhanced its operational efficiency, reduced error rates, and improved customer satisfaction through the implementation of TIM solutions.

SUPPLY CHAIN TRACKING

The success in logistics depends on the correct and efficient movement of products through the supply chain.

Advanced tracking systems implemented by TIM have increased the trackability of supply chain activities to 98%.

The reduction in error rates has led to cost savings and smoother business processes.

The real-time tracking system has decreased erroneous processes by 40%, preventing time and resource wastage and enhancing customer satisfaction.

In the case of CEVA Logistics, this advanced tracking system has made supply chain management more effective and error-free.

SMART PICKING PROCESS

01 The use of Smart Gloves technology has reduced the picking process time by an average of 35%, increasing the total number of transactions conducted within a day and thereby expanding the operational volume.

03 The usage of gloves is integrated with feedback mechanisms and ERP systems. This integration minimizes human errors during picking processes and ensures uninterrupted progression of work procedures.

02 A productivity increase of up to 50% has been achieved in picking operations, allowing more work to be done with less labor, thus reducing operational costs.

04 At CEVA Logistics, the implementation of the Smart Picking Process has significantly increased the speed and accuracy of warehouse operations.

ENHANCED VISIBILITY

Enhanced visibility has resulted in up to 30% increase in efficiency in warehouse operations. This leads to smoother processes and reduced time losses.

TIM solutions track every product, glove, and operation in real-time within the warehouse. This allows for accurate calculation of workload and identification of factors reducing efficiency.

At CEVA Logistics, this system has made the management of warehouse operations more effective, optimizing time and resource management.

HANDS FREE OPERATIONS AND TIME SAVINGS

In CEVA's extensive warehouses, the ergonomics and speed provided by TIM Smart Gloves have significantly boosted operational efficiency.

The use of these gloves has enabled workers to perform their tasks more comfortably and quickly, thereby enhancing the overall efficiency of warehouse operations.

The use of TIM gloves has increased individual worker productivity by 25%.

ROI INCREASE

The implementation of TIM solutions at CEVA Logistics has increased the speed and accuracy of warehouse operations, reducing the workload per employee. Being able to do more work with less labor has contributed to reducing operational costs. Additionally, reduced error rates and more efficient processes have increased customer satisfaction and loyalty, positively reflecting on the company's revenues in the long term.

This investment has strengthened CEVA's competitive position in the logistics sector, solidifying its market leadership. The quick return on investment and cost savings have allowed the company to allocate more resources to strategic investments, maintaining its innovative stance in the industry.
